

Lab Sheet

1. Get the following output using PHP and HTML

Hello There

Welcome to learn PHP

- PHP is a server scripting language, and a powerful tool for making dynamic and interactive Web pages.
- PHP is a widely-used, free, and efficient alternative to competitors such as Microsoft's ASP.

2. Change the color of the heading in the above example using Style.

Hello There

Welcome to learn PHP

- PHP is a server scripting language, and a powerful tool for making dynamic and interactive Web pages.
- PHP is a widely-used, free, and efficient alternative to competitors such as Microsoft's ASP.

3. Add the following content using the **php echo** command and format as given in the output.

The PHP echo Statement

The echo statement can be used with or without parentheses: **echo** or **echo()**.

4. Add the following content using the **php print** command and format as given in the output.

The PHP print Statement

The print statement can be used with or without parentheses: **print** or **print()**

5. Add the following table to your web page. Use **PHP echo** or **print** to print the content. Use HTML to format the table.

echo vs print

echo	print
has no return value	has a return value of 1
echo can take multiple parameters	print can take one argument
echo is marginally faster than print	slower than echo
