Introduction to Scrum

What is Scrum?

- A framework for agile project management.
- Focuses on delivering high-value products through iterative development.

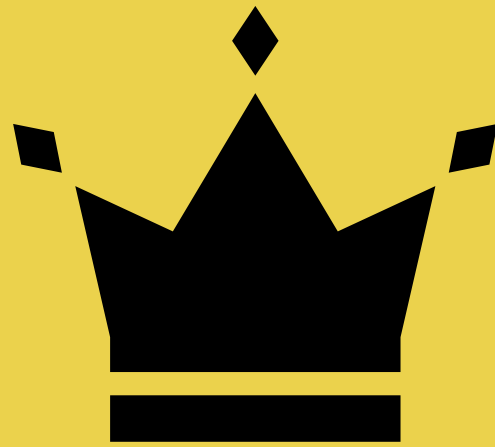

Why Scrum?

- Enhances collaboration, flexibility and accountability.

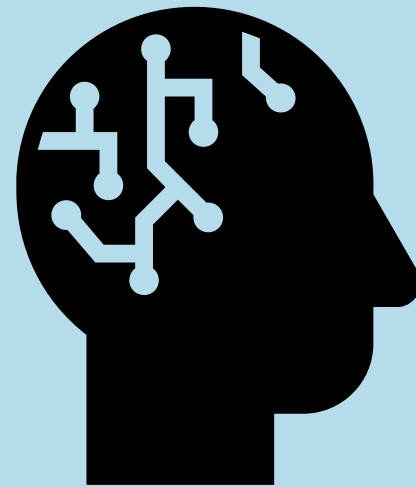

Composed of three main roles

Key Roles in Scrum

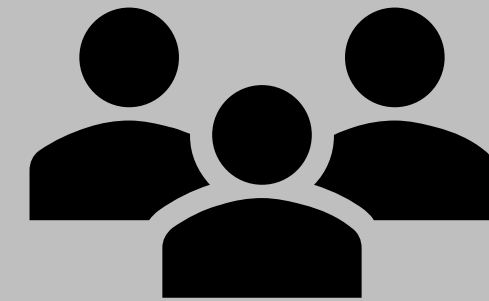

1. Product Owner

- Represents stakeholders.
- Responsible for defining and prioritizing the product backlog.

2. Scrum Master

- Facilitates the Scrum process.
- Removes obstacles and ensures adherence to Scrum principles.

3. Development Team

- Cross-functional group that does the work.
- Self-organizing and responsible for delivering increments of the product.

Scrum Artifacts

01

Product Backlog

- A prioritized list of features, enhancements, and bug fixes.
- Continuously updated based on feedback and changing requirements.

02

Sprint Backlog

- A subset of the product backlog selected for a specific sprint.
- Contains tasks to be completed during the sprint.

03

Increment

- The sum of all completed product backlog items at the end of a sprint.
- Must meet the definition of "done" to be considered complete.

Scrum Events

01

Sprint

- A time-boxed iteration (usually 1-4 weeks).
- Goal is to produce a potentially shippable product increment.

02

Sprint Planning

- Meeting to define the sprint goal and select items from the product backlog.

03

Daily Scrum

- A 15-minute stand-up meeting for the team to synchronize activities and plan for the next 24 hours.

04

Sprint Review

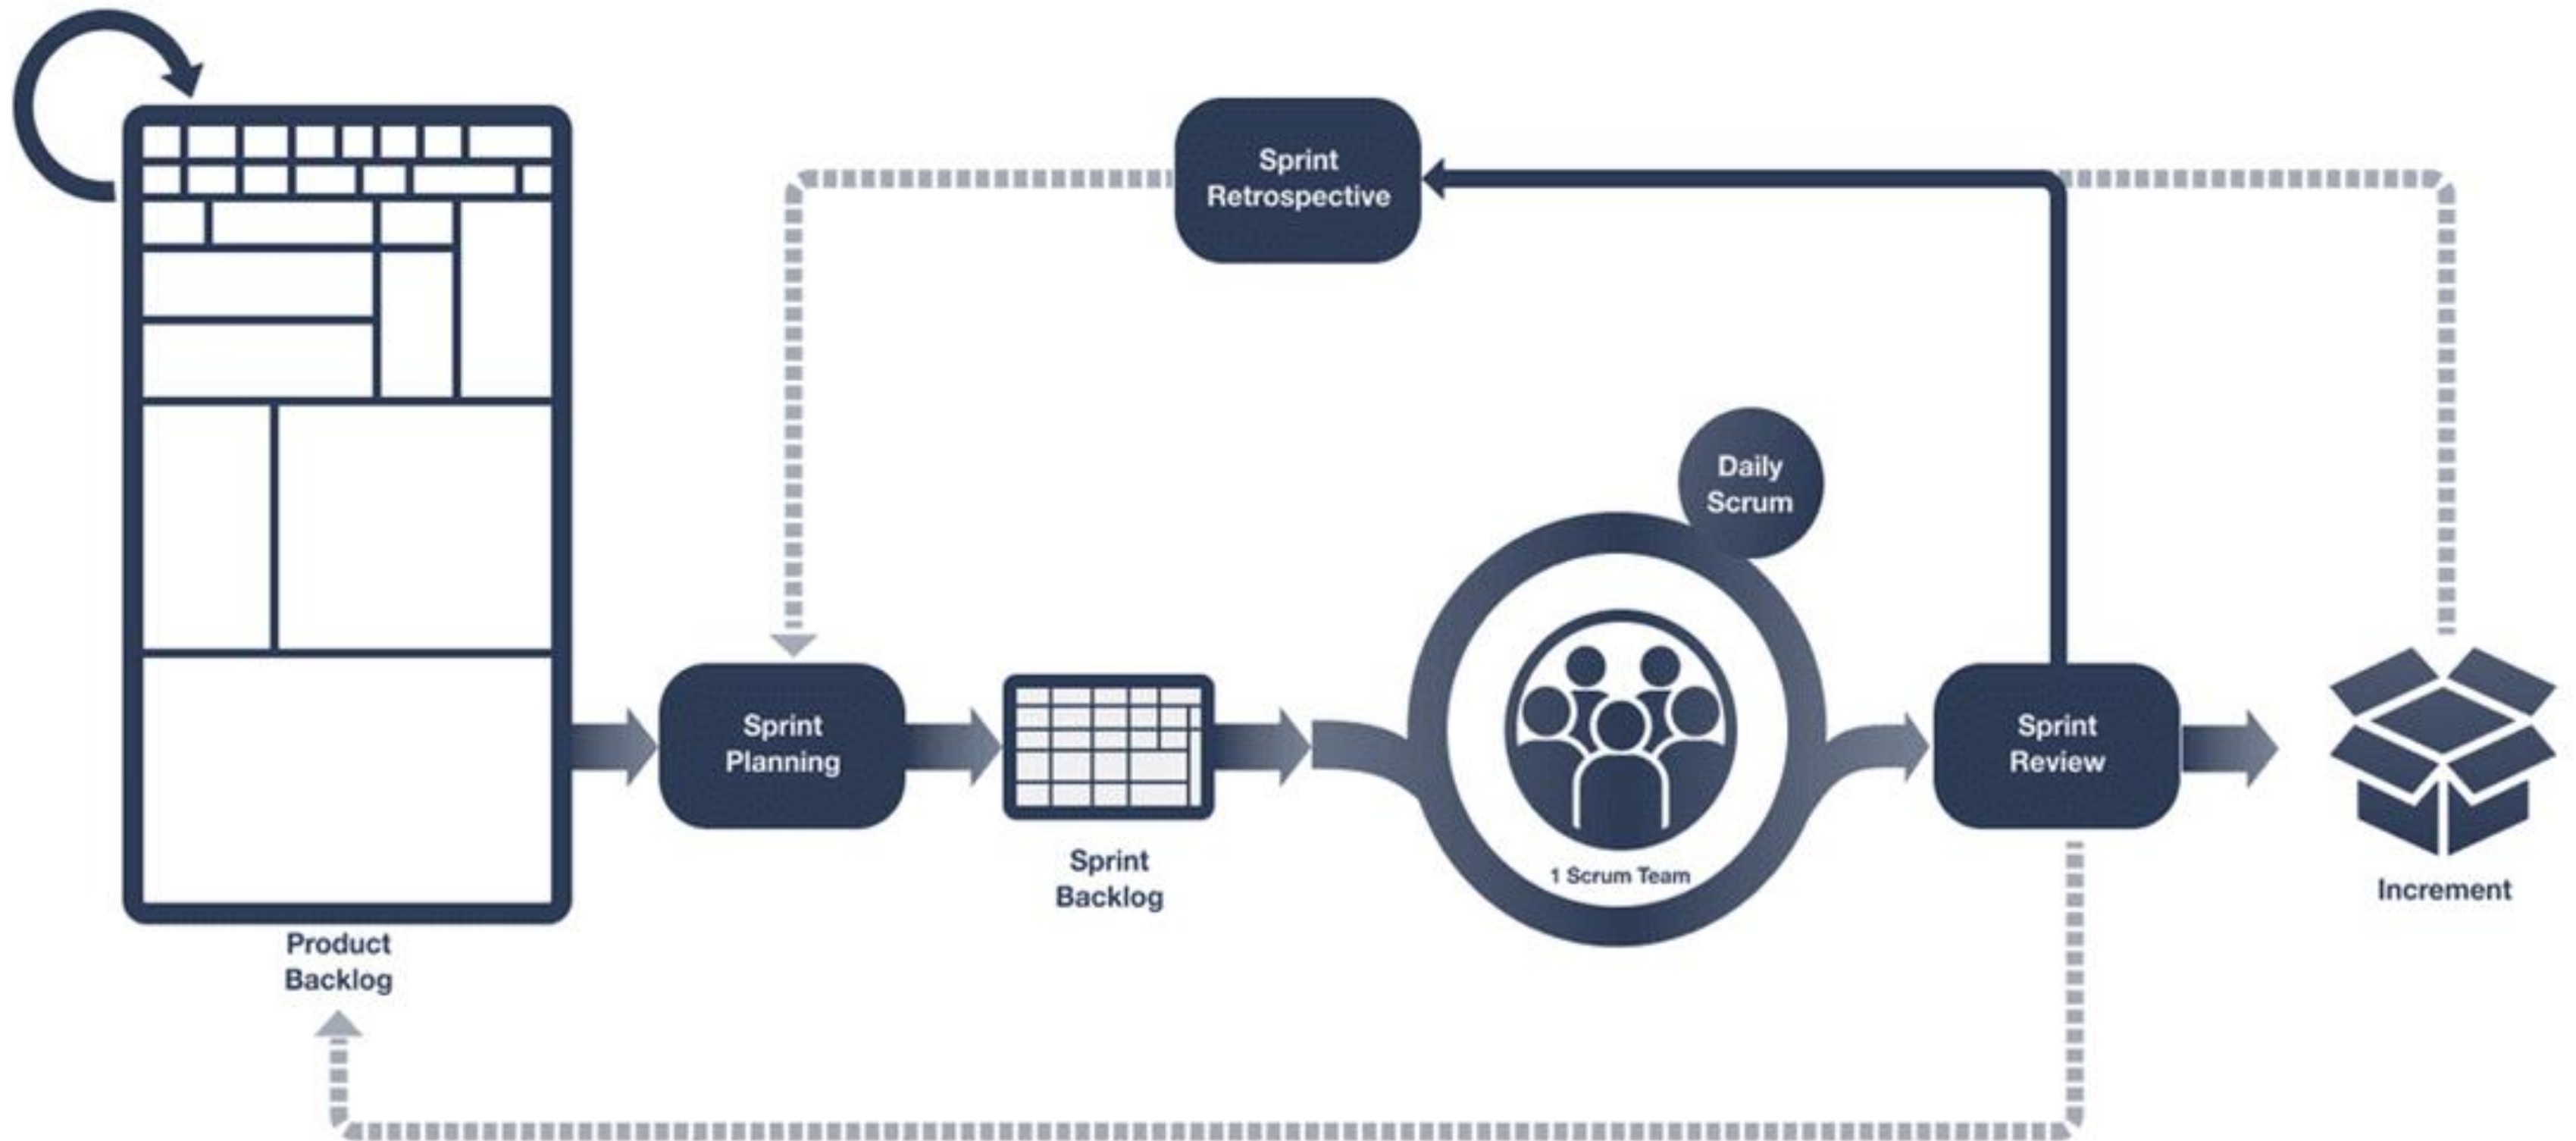

- A meeting at the end of the sprint to showcase the increment to stakeholders.
- Gather feedback for future sprints.

05

Sprint Retrospective

- A meeting to reflect on the sprint and identify improvements for the next sprint.

Scrum Workflow

Benefits of Scrum

Increased Transparency

Regular meetings and updates keep everyone informed.

Higher Product Quality

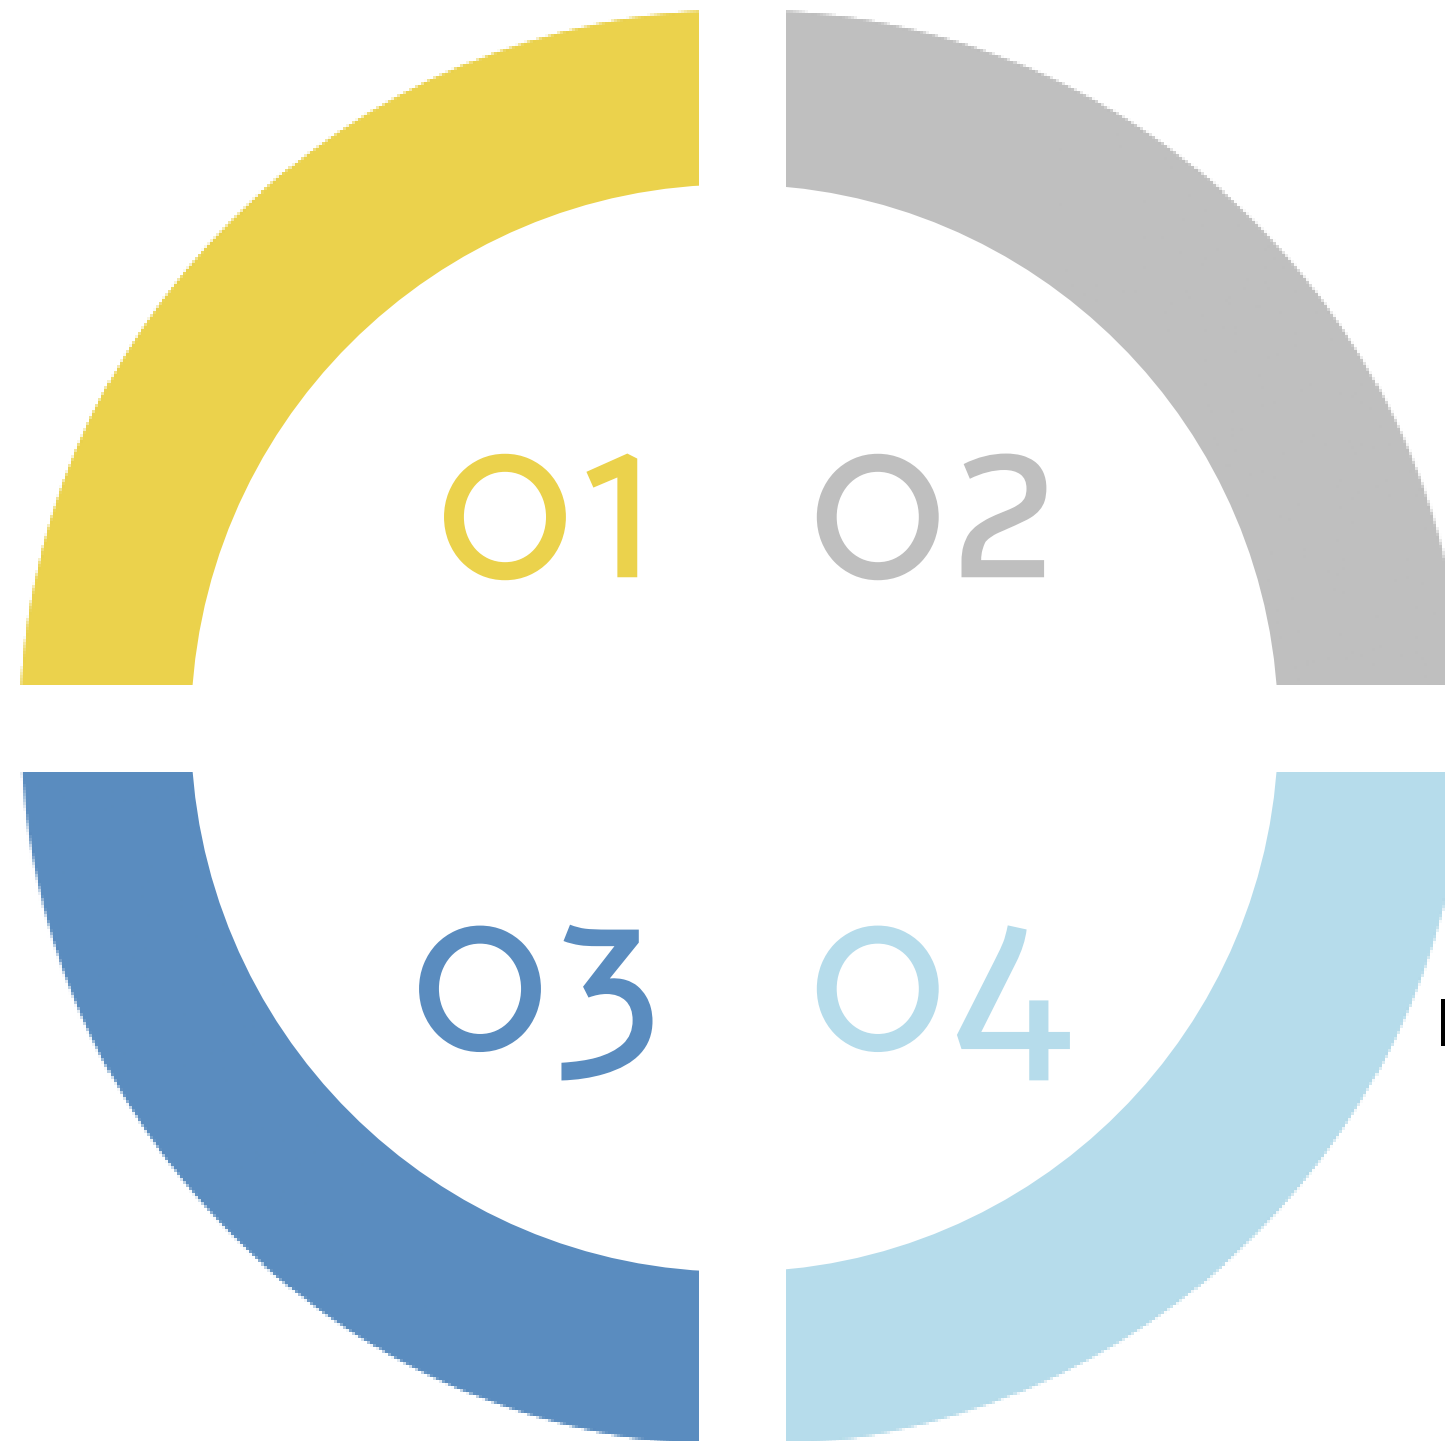

Continuous testing and feedback lead to better outcomes.

Enhanced Flexibility

Ability to adapt to changing requirements and priorities.

Improved Team Collaboration

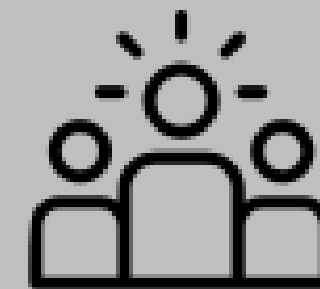

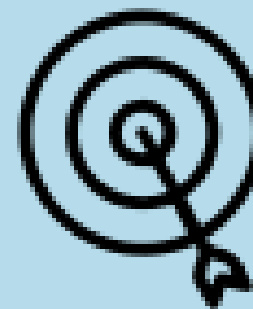

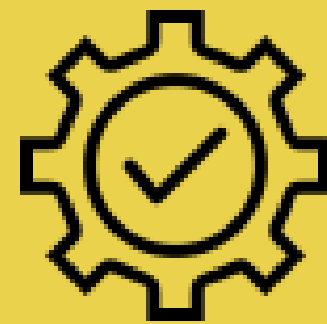

Promotes a culture of teamwork and accountability.

Challenges of Scrum

Role Clarity

Misunderstanding roles can lead to confusion and inefficiencies.

Team Dynamics

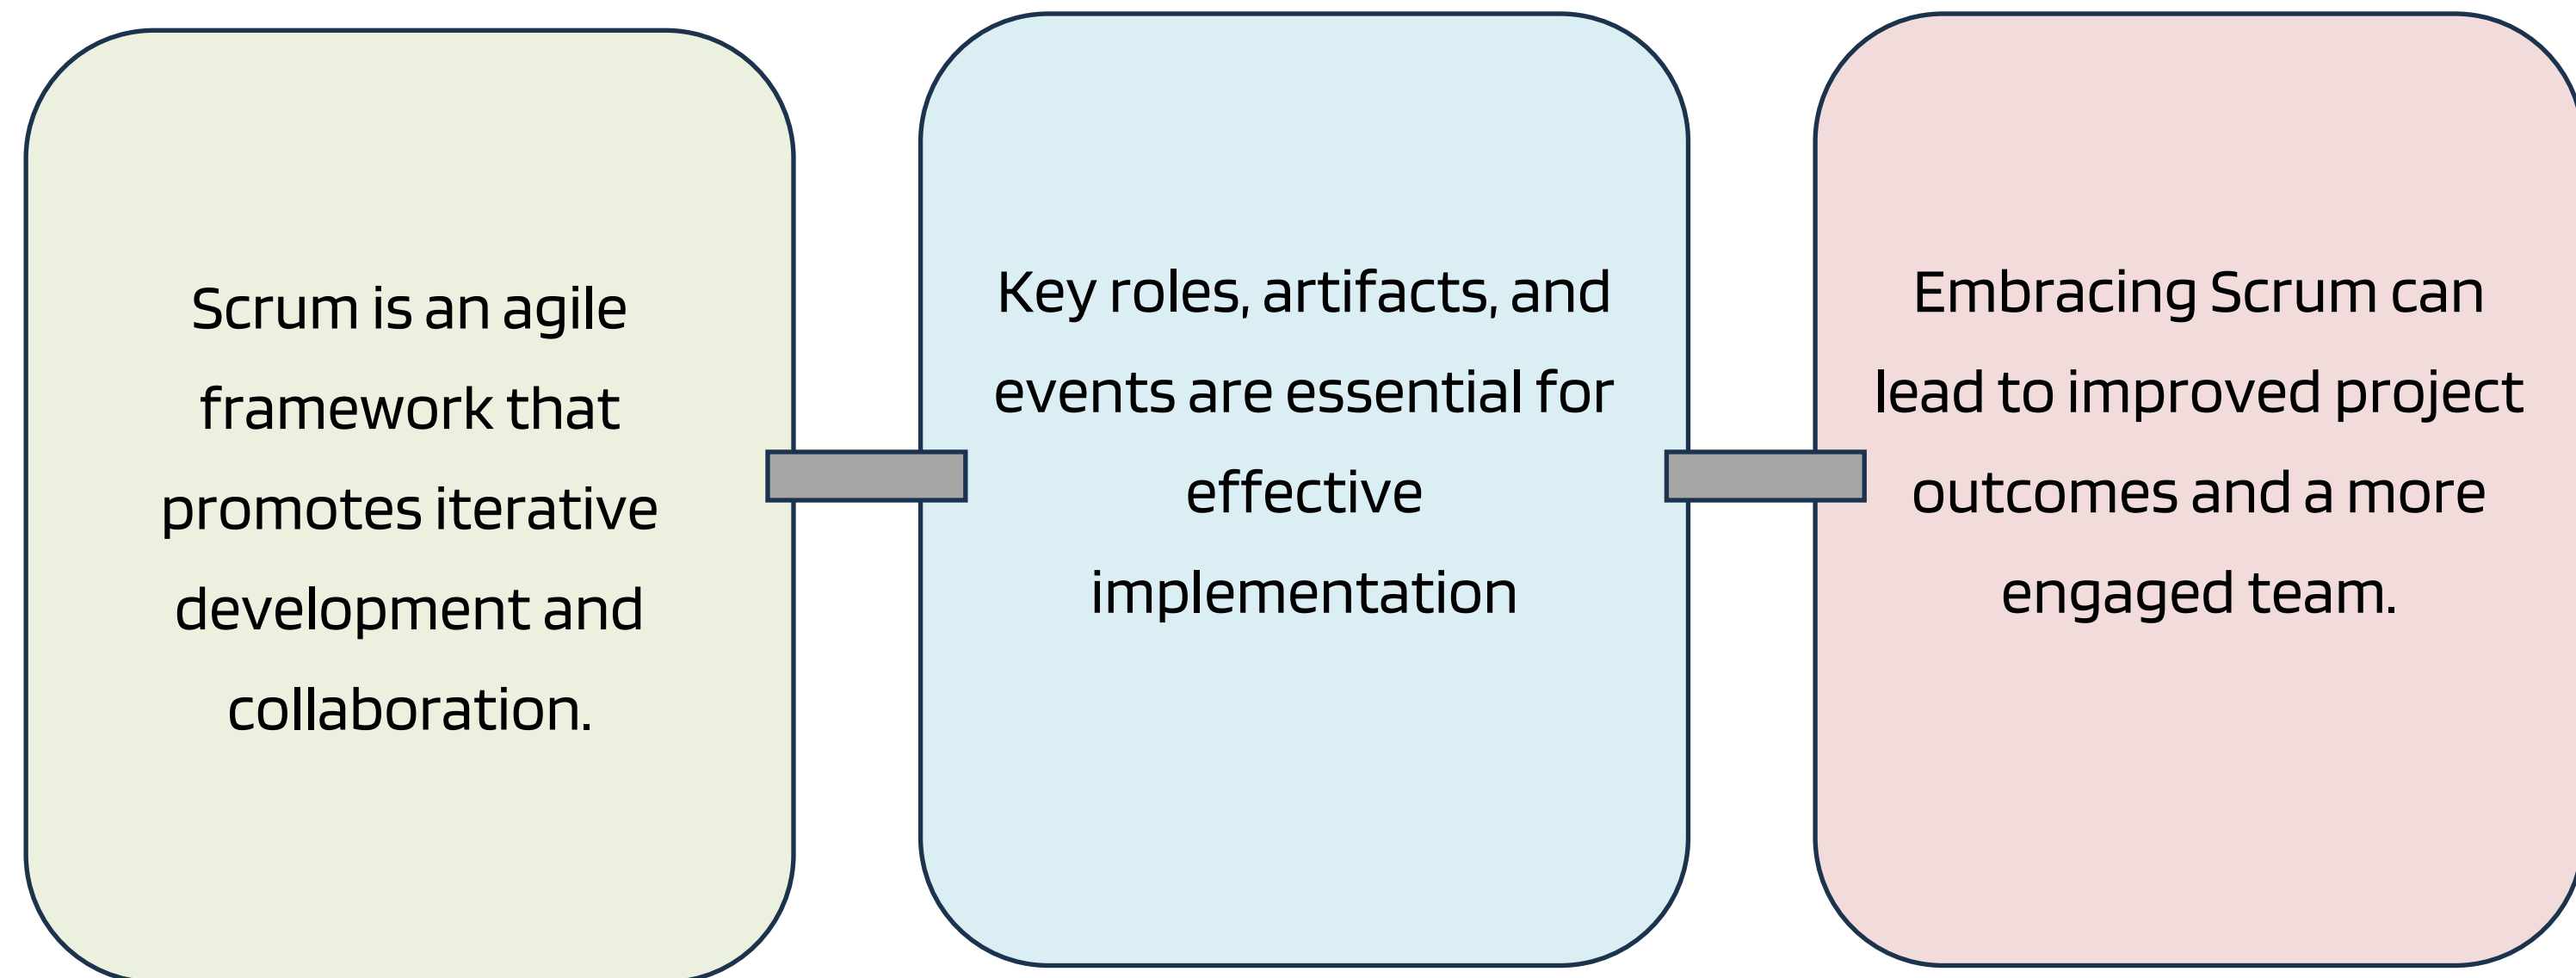

Requires strong collaboration and communication skills.

Commitment

Requires full commitment from all team members to be effective.

Conclusion

- ❖ Companies like Google, Spotify and IBM using scum framework to enhance their project management process
- ❖ Tools like Jira, Trello and Asana helps the companies to enhance their process
